

TYPE Cobalt-based thermo shock resistant alloy for overlay applications.(Stelitte 21, CoCr-E, E Co1)

APPLICATIONS CEWELD® DUR 21U is a Stelitte 21 alloy with excellent properties against abrasion, thermal shock

and corrosion in conjunction with high temperatures. It produces a high-quality hardfacing on components that are exposed to multiple stresses from erosion, corrosion, cavitation, pressure, impact, abrasion and high temperatures up to 900 °C. For example: sealing surfaces on fittings, valve seats and cones for combustion engines, metal-to-metal sliding surfaces, highly stressed hot

work tools without thermal shock, grinding, stirring and drilling tools..

PROPERTIES CEWELD® DUR 21U shows excellent welding properties and self-releasing slag. The weld metal can

be machined with carbide tools and by grinding. The hardness of the weld metal decreases by about 20% at 600 °C. The weld metal is highly heat-resistant up to 900 °C. CEWELD® DUR 12U offers a low coefficient of friction and exceptional resistance to abrasion. Cavitation and erosion resistance is ten times that of 304 stainless steel. CEWELD® DUR 21U can be used to protect bearing surfaces in

non-lubricated conditions due to its resistance to metal-to-metal wear.

Hardness of the pure weld metal: 31 - 37 HRC

work-hardened: approx. 45 HRC Hot hardness at 600 °C: approx. 240 HB

 CLASSIFICATION
 AWS
 A 5.13: E CoCr-E

 EN ISO
 14700: E Co1

DIN 8555: E 20-UM-350- CTZ

F-nr 71

SUITABLE FOR Stellite 21 alloy for cladding Seats and Valves etc. low friction due to high cobalt content
