

CEWELD ERTi-12 Tig

TYPE Solid drawn Titanium Grade 12 welding wire.

TOEPASSINGEN This alloy finds his applications in chemical industry and offers excellent Weldability. Often

recommended for pressure vessels and piping for its superior strength alone.

EIGENSCHAPPEN ER Ti-12. Grade 12 (Ti 0.8Ni0.3Mo) is an intermediate strength grade originally developed to provide

> enhanced crevice-corrosion resistance in high temperature brines, but at lower cost than Grade 7. The improved performance is believed to be the result of Ni++ and Mo++ ions that alter the surface electrochemistry of the material in the crevice or under a surface deposit. Grade 12 has better elevated temperature properties than Grade 2 or 3 and is sometimes specified for pressure vessels

or piping for its superior strength alone.

CLASSIFICATIE AWS A 5.16: ERTi-12
